# ROLLER BLINDS

These contemporary, stylish and functional blinds add a touch of class to every home

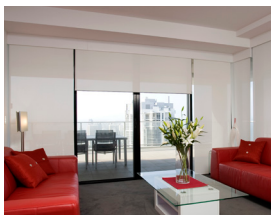

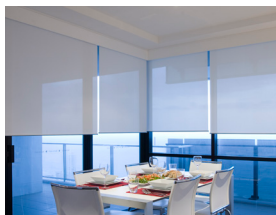

Roller blinds are an extremely stylish window solution and are the height of fashion at the moment. They are one of the oldest types of blinds but have made a huge comeback with the modern fabrics that are now available.

We have sourced an extensive range of fabrics from a variety of suppliers to bring you the best selection of colours, textures, designs and prices. This allows you to make a decision based on both style and budget, without compromising the final look.

This range of fabrics allows you to choose whether your blind offers full privacy and blockout, or partial privacy with various degrees of lightfiltering.

We can offer a variety of control systems from the standard chain through to full motorisation.

## SUNFILTER

Sunfilters have earned their popularity through making your indoors more environmentally friendly. While they effectively block a great deal of heat and UV, they do not completely block your view. At night with the light on, you will see in through a Sunfilter blind.

Sunfilter blinds are incredibly durable and easy to clean. They don't collect dust and if anything gets spilt on them they can be wiped down with warm soapy water and a soft cloth.

## LIGHT FILTERS

This range of fabrics is in between a Sunfilter and a Blockout blind. They have a higher degree of light diffusion than a Sunfilter fabric but will still allow light into the room which creates a lovely soft light tone. You cannot see out through these fabrics during the day and at night anyone outside would only see a slight shadow effect if you were close to the window.

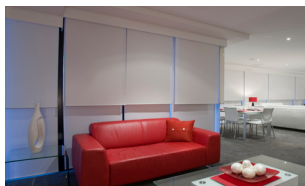

## BLOCKOUT

Blockout blinds provide you with full privacy and will completely block the sun out. The majority of the Blockout fabrics have a backing that will increase the thermal efficiency of the fabric. This white backing means that you can vary the colours of the blinds in different rooms to match your décor but have a uniform look on the outside.

## INSTALLATION

When roller blinds are installed within your window jamb there will be gaps of between 20-25mm between the fabric and the jamb. Also, if the window is too wide for the fabric then where two blinds meet, there will be a 15-20mm gap between the blinds.

# ROLLER BLINDS

**Sunfilter** fabrics block between 90-97% of harmful UV rays helping to protect your furnishings. Many of these fabrics also have the Greenguard Certification which gives you the peace of mind that there will be no harmful emissions from this fabric.

**Textured** and pattern fabrics make up a big part of our designer range of blackout fabrics. You can choose from textured or finely woven fabrics in a huge colour range. Several of the colours have toned light and dark flecks that give your blind a life of its own. Many fabrics have matching lightfilters available.

**Blockout** fabrics are designed for privacy and are available in a wide range of fashion colours as well as a selection of bright prints. The fabrics range from natural linen textures to tough wearing easy clean fabrics that are great for kitchens.

**Double Roller** blinds give you all of the options for light control that you may require. These are essentially two roller blinds installed in the same window. They will usually have a Sunfilter or Lightfilter fabric at the back and a Blockout fabric in the front. They are operated with separate chain systems.

**Quality** We pride ourselves on the quality of all our products and our roller blind range is no different.

**Motorisation** Motorisation is available on all of our roller blinds. You can choose from battery operated blinds that can be fitted into any existing opening, or 230V hardwired blinds. These can be controlled by either remote controls or apps on your phone.
